

Postcard to the Park – how not to restore a bulldozed track

Description

Dear LLTNPA,

I am afraid by the time you read this, the section of turf in the photo will have long gone – its just too comfortable for cattle to walk on. This is a shame because your Guidance on Renewables recommends the creation of a turf/soil strip along the centre of all new bulldozed tracks leading to dams to help them blend in with the environment. A good idea and the contractor at Glen Falloch has tried to do this but it appears they were wasting their time.

I look forward to hearing who is going to pay to have it fixed.
